

BULK SAMPLE PROCESSING

METALLURGICAL SERVICES

SGS Minerals Services' pilot equipment processes samples up to 1500 t in size and can either provide a finished product, perhaps for commercial evaluation, or a product requiring further testing. Product quality is ensured through established and standardized operating procedures, scheduled sampling campaigns and through the use of our process control systems.

Typical bulk processing techniques are:

- Crushing
- Grinding
- Froth flotation
- Separation by size, gravity, heavy media
- Magnetic separation

SGS Minerals Services accommodates your requirements and works with you to develop a cost-effective program. We have the specialists and the facilities to assist with your project's specific parameters.
